ANIMATION TERMS

Animation - *(n)* is an art form which brings inanimate objects or drawings to life through capturing sequential images.

Animate - *(v)* to bring to life.

Sequential - *(adj)* a word used to describe a deliberate order or sequence.

Stop motion animation - is a type of animation where sequential images or photographs are stitched together to create a moving image.

Pixilation - is a stop motion technique where live actors are used as frame-by-frame subjects in an animated film. Actors pose while one or more frame is taken and change their pose slightly before the next frame is taken.

Frame - 1 photo.

1 Second of Animation = 12 frames

Clip - A series of frames stitched together to create a short moving image.

Onion Skin - An animation setting used to show the last picture taken in combination with a live view. This feature is helpful for calculating how big or small the next move should be.
